DETAILED ACTION

Response to Arguments

1. Applicant's arguments, see **REMARKS/ARGUMENTS**, filed 09/27/2004, with respect to the rejection(s) of claim(s) 1, 5, 6, 10, 11-15 under 35 U. S. C 102(a) and 35 C. F. R Double Patenting have been fully considered and are persuasive. Therefore, the rejection has been withdrawn. However, upon further consideration, a new ground(s) of rejection is made in view of Ishibashi et al. (US Patent 5,663,942).

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

3. Claims 1, 5, 6, 10, 11 and 15 are rejected under 35 U.S.C. 102(a) as being anticipated by Ishibashi et al. (US Patent 5,663,942).

(1) With regard to claim 1, Ishibashi et al. discloses in (Fig. 8) an event edge synchronization system, comprising: a first clock zone device (304) configured to generate an even signal based upon a first clock rate; a second clock zone device (300) configured to operate at a second clock rate, which is asynchronous with said first clock rate; and a synchronous notification subsystem (303) configured to receive said event signal, synchronize said event signal to said second clock rate based

upon an edge transition of said event signal and said second clock rate, and generate a synchronous notification signal therefrom (col. 11, lines 23-42).

(2) With regard to claim 5, claim 5 inherits all the limitations of claim 1.

Buckenmaier further discloses wherein said synchronous notification subsystem synchronizes said event signal to said second clock rate based upon a positive edge transition of said event signal (col. 11, lines 35-42).

(3) With regard to claim 6, claim 6 inherits all the limitations of claim 1.

(4) With regard to claim 10, claim 10 inherits all the limitations of claims 6 and 5 above.

(5) With regard to claim 11, claim 11 inherits all the limitations of claim 1.

(6) With regard to claim 15, claim 15 inherits all the limitations of claims 11 and 5 above.

Allowable Subject Matter

4. Claims 2-4, 7-9, 12-14 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims. The following is a statement of reasons for the indication of allowable subject matter: The instant application discloses an event edge synchronization system. Prior art references show similar methods but fail to teach: **“a third logic device configured to generate a third intermediate signal based upon said second intermediate signal and said clock signal of said second clock zone device”**, as in claims 2, 7, 12, **“first, second and third logic**

devices are **“D” type flip flops**”, as in claims 3, 8, 13, **“comparison logic device is an exclusive-OR (XOR) gate”**, as in claims 4, 9, 14.

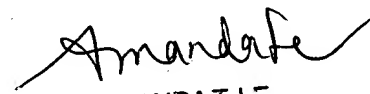

5. Claims 16-20 are allowed.

6. The following is a statement of reasons for the indication of allowable subject matter: The instant application discloses an event edge synchronization system. Prior art references show similar methods but fail to teach: **“a pattern processing engine”**, as in claim 16.
